

Basic chord substitutions

- Review: 12 keys, each with 7 chords/scales
- Introduce circle of fifths: groups chords as keys in pie slices I in middle, IV to left, V to right, ii, vi, ii below. Moveable “pie slice” can highlight any key. Relative minor key is below each major key.
 - Easiest subs are relative minor, e.g. *vi* for *I* (Am for C), but others work too, like *ii* for *IV* (Dm for F)

- Example (next page): basic tune with the turnaround (cadence) twice, first as I-IV-V, then again with minor chord substitutions (example audio file: <https://github.com/inside-music/inside-music/raw/refs/heads/main/media/major%20minor.mp3>)

majorly minorly

C Am7 F Dm7

21 Dm7 G7 C C/G

• Exercises:

○ Listen:

- The melody is the same, but does introducing minor substitutions change the way it sounds or feels? Does it *feel* different? How so?
- How does the bass line change? Does it need to change?

○ Think and play:

- What other substitutions work in the turnaround?
- Where can you substitute in the *iii* chord (Em)?
- Where else can you work in the *ii* and *vi* chords?
